SUMMARY OF THE INVENTION

[0003] A new laminated glass messaging system. This system serves as a signage device that can be used alone or with neon gas tubing, and / or other types of signs in the future. Illuminate film is installed during the glass manufacturing process to make this new laminate glass messaging system for use in business, homes and buildings. The illuminate film is sandwiched between first layer of glass and second layer of glass that has an wire connections attached. The illuminate film is connected to microchip for input, activate by electrical current to display numbers, letters, phrases messages and advertising message. Just imagine, your home and commercial buildings can be found easier by an ambulance, fire department, patrol car, cab driver, repair person and delivery person can depend on illuminate signs at day or night. Businesses can used to display various advertise messages.
